

**INCIDENT INTELLIGENCE &
LOSS ANALYSIS SERVICES**

CLARITY AFTER AN INCIDENT

“Venlieb supports organisations in gaining a clear understanding of security incidents, operational losses, and emerging risks.

When a security breach or significant loss occurs, organisations require straightforward answers: what took place, why it happened, and which vulnerabilities still exist. Venlieb delivers independent incident intelligence, detailed loss analysis, and practical resilience advisory services throughout Southern Africa.

By integrating specialised physical security knowledge, structured analytical methods, and real-world operational experience, we assist clients in uncovering root causes, accurately assessing impact, and applying effective, actionable improvements.”

Danie Liebenberg | Founder & Principal

OUR SERVICES

Incident Examination & Root Cause Analysis

We conduct independent reconstruction and detailed analysis of security incidents using physical evidence, digital records, witness statements, operational data, and environmental context. Our goal goes beyond establishing what happened - we identify the underlying conditions, failures, and vulnerabilities that enabled the incident.

Loss Quantification & Impact Assessment

We provide thorough evaluation of the financial, operational, reputational, and business continuity impacts resulting from security incidents or recurring losses. This includes support for insurance claims, executive reporting, strategic reviews, and risk prioritisation.

Loss Trend Intelligence & Pattern Analysis

We analyse historical incidents, operational losses, and security events across sites, regions, or time periods to uncover emerging risks, recurring vulnerabilities, and systemic weaknesses. Findings are presented in clear, actionable reports and intelligence designed to support sustained loss reduction.

Post-Incident Review & Resilience Planning

We facilitate structured after-action reviews that transform operational lessons into measurable improvements. This includes practical recommendations on procedures, physical security measures, reporting structures, escalation processes, stakeholder communication, and overall organisational resilience.

ABOUT US

Venlieb is a specialised practice operating under the Liebenberg & Associates umbrella - an independent physical security consultancy founded in 2009.

This structure gives clients access to a broad depth of physical security expertise, while allowing Venlieb to maintain a sharp, dedicated focus on incident analysis, intelligence, and organisational learning.

Our engagements are usually led by Danie Liebenberg and supported by Elio Zannoni, Ruaan Fourie, and other specialist associates as needed.

Independent analysis is essential when organisations need an objective, unbiased understanding of complex security incidents or repeated operational losses.

Internal teams, guarding providers, technology suppliers, and other stakeholders often view events through the lens of their own roles and responsibilities. These perspectives can unintentionally restrict clarity, slow down corrective measures, or hide deeper root causes.

Venlieb maintains complete independence from guarding providers, technology vendors, and internal operational structures. This allows us to:

- Assess incidents with true objectivity
- Challenge assumptions when required
- Uncover systemic weaknesses without bias
- Deliver credible, defensible findings and recommendations
- Support executive and board-level decision-making with clarity and discretion

Our core purpose is to establish the facts, expose vulnerabilities, and drive meaningful, lasting improvement.
